

INAPRO[®] H

The One That Works

Product Description

INAPRO[®] H is a highly concentrated amphoteric surfactant used for herbicides to improve performance. INAPRO[®] H is the industry's first bio-renewable herbicide adjuvant to fully permeate the plant system. Unlike the commodity adjuvants, INAPRO[®] H uses buffered amine oxides (BAO) to re-enforce the stability and movement of chemicals within the plant, maintaining their effectiveness and targeting power as they move.

Benefits and Features

- Bio-renewable (not derived from petrochemicals)
- Fully water soluble; freeze/thaw stable
- Formulated for robust tank stability
- Fully permeates most plant bodies
- Maintains stability and targeting power as pesticides move freely through the plant system
- Stabilizes ready-to-use applied formulations to better ensure intended crop protection
- Components "generally recognized as safe" by USFDA and have low inherent toxicology

Application Rate

0.203%- 2.000% v/v -or- 1.5 pt. to 2 gal per 100 gallons
